

Rajat Kumar Sharma Software Engineer

✉ merajatsharma@outlook.com ☎ +91-8350864554 🔗 LinkedIn 🐙 GitHub 🌐 www.rajatkumarsharma.com

Full-Stack Software Engineer with 3+ years of experience building end-to-end web applications across diverse industries. Skilled in backend and frontend development—building RESTful APIs with Python, JVM/Scala, SQL, and managing asynchronous tasks via Celery; while delivering intuitive, state-managed user interfaces using React, Angular, and Redux. Experienced in containerized deployments with Docker, orchestration using Kubernetes, and cloud platforms including GCP and AWS, along with setting up CI/CD pipelines. Focused on scalable solutions and driving operational efficiency through automation and optimized workflows.

📁 EXPERIENCE

Software Engineer, Avathon (Formerly SparkCognition) 10-2024 – present | Bangalore, India

- **Core Logistics and Backend Development:** Engineered the backend for a maritime logistics platform using Python (Django Rest Framework) and Scala (Slick), delivering 70+ APIs. These enabled critical functionalities including real-time fleet/shipment management, KPI dashboards, data synchronization, and Reassign, Reconsign, and Optimize workflows.
- **Optimized API Performance:** Reduced API latency by 20-30% through database-level pagination, advanced SQL queries (prefetching, DB-level filtering), and caching in Django, ensuring high responsiveness under load.
- **Full-Stack Collaboration and UI Contribution:** Collaborated with the front-end team by co-designing API contracts for React/TypeScript features. Provided targeted contributions and bug fixes to the UI codebase, ensuring seamless end-to-end functionality and a cohesive user experience, which improved delivery by 10–20%.
- **Centralized Authentication:** Deployed a security model using Keycloak (JWTs) with custom user models, applying role-based permissions across Python/Scala microservices to secure operational data.
- **System Responsiveness and Automation:** Leveraged Celery for critical asynchronous tasks (scheduling, reports, RPA syncs); automated real-time external data integration and synchronization (APIs, web scraping, cron jobs).
- **Streamlined Dev and API Stability:** Dockerized Python/Django/Scala services to simplify CI/CD and ensure reproducible environments; enhanced API stability with logging and error handling, making deployment and monitoring 1-time tasks.

Software Development Engineer, Buddi.Ai 05-2021 – 09-2024 | Chennai, India

- **Multi-Factor Authentication System:** Designed, implemented, and dockerized an MFA system to enhance security in applications beyond regular login, utilizing TOTP, HOTP algorithms, and email OTP generation.
- **Revenue Cycle Management System:** Enhanced a Healthcare RCM system by incorporating React and Kendo components, integrating RESTful APIs, and managing state with Redux, achieved 70% automation, maintained 95%+ claim accuracy, streamlined billing, reduced coding costs, and ensured security and scalability.
- **Healthcare Workflow Systems:** Implemented WMSs with Play-Scala microservices and Angular components for SMEs to efficiently prepare for client demos, audit medical charts, and export results within 3 to 12 hours.
- **Medical Annotation Tool:** Developed and dockerized an Annotation tool using Angular (frontend) and Play-Scala Framework (backend), significantly reducing manual work for healthcare SMEs in medical records annotation and management by 80%.

🎓 EDUCATION

Computer Science Engineering (B-Tech), Lovely Professional University 2018 – 2022 | Jalandhar, India

- **CGPA:** 7.88 | **Specialization:** Machine Learning and Robotic Process Automation.
- Technical Head at Aashary, a student organization at LPU.

🧠 SKILLS

Frontend Developer

Angular, React, Redux, Ionic, Design System, Micro-Frontend, Bootstrap, Tailwind, Material UI, Kendo, HTML, CSS

Backend Developer

Django Rest Framework, Celery, Play Framework, SBT, FastAPI, Rest APIs, SQL, JOOQ, Slick, PostgreSQL, NodeJs, Spring Boot, Web Scraping

Programming Languages

C, C++, Java, JavaScript, Typescript, Python, Scala

Other

Git, Docker, AWS, GCP, Keycloak, RPA, Jira
